

## 2016 RFP Vendor Questions

Can the County provide the tile grid and county boundary (or confirm that we can use the same files from previous Rutherford projects)? [This data is available on our Citrix Sharefile at the link below:](#)

<https://rctn.sharefile.com/d-sfc095e1551d41aab>

Are current monuments/control location shapefiles available for review? [Yes, they are included in the data download.](#)

Planimetric features: RFP states that "plan features will not be captured outside the county boundary". The pricing sheet requires "Per 100 index" pricing. Looking at the tile grid in Section K, it appears that many 100-scale tiles fall outside the county boundary. Please confirm that we should only consider the 100-scale tiles intersecting the county boundary in this cost item. [The Plan features should be priced and clipped to the county boundary, not the 100' index of those tiles outside the boundary.](#)

DTM Point accuracy; RFP specifies both 11-15 cm AND 15-18 cm. Please confirm accuracy requirement. [11-15cm is the accuracy requirement for the LiDAR.](#)

Is hydro-flattening of the LiDAR required? [No Hydro-flattening is required but we welcome pricing for those solutions in addition to standard LiDAR pricing.](#)

Is hydro-enforcement of the LiDAR required? [No Hydro-enforcement is required but we welcome pricing for those solutions in addition to standard LiDAR pricing.](#)
